- ◉ Provide for Deliveries of Fuels and Non-Fuel Items like Labor, Parts, etc.
- ◉ Track Profitability by Customer
- ◉ MAS90 and MAS200 Accounts Receivable, Inventory Management, Sales Order, and General Ledger Interfaces

DM2 Home Heat™ software helps you optimize your delivery efficiency to home heating accounts through time-tested Degree-Day, Julian, and Tabular scheduling.

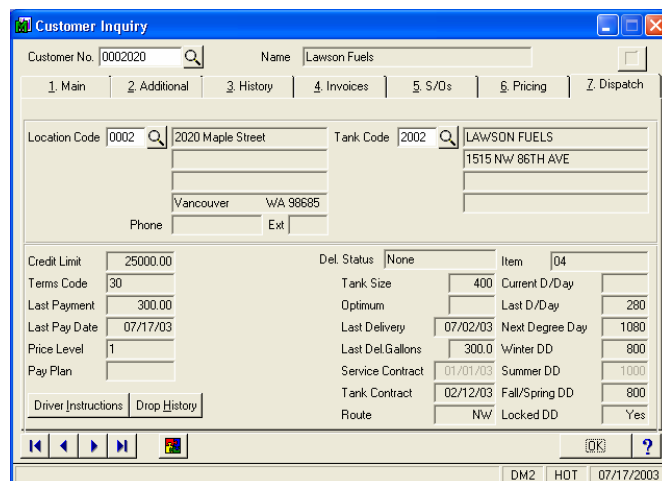

An integration into Accounts Receivable Customer Inquiry offers immediate access to all vital customer information such as credit status, payment history, current aging, address, delivery history, and billing detail - all in one convenient location.

Simplified screen inquiry saves you time with extensive search tools. Office staff can look up accounts by any part of an account name, address, phone number, ZIP code, and many more.

Customer profitability reports take into account fuel deliveries and service calls.

The Home Heat module is tightly integrated with award-winning MAS 90 and MAS 200 accounting software - i.e. General Ledger, Accounts Receivable, Sales Order, and Inventory Management modules.

Leverage DM2's 15 years of experience with heating oil dealers and world-class MAS 90 and MAS 200 accounting software to help make your company more competitive in a tough market.

DM2 Home Heat™

FEATURES

Degree-Day, Julian, and Table Scheduling	Optimize deliveries based on Degree Day - Hot Water, Degree Day - No Hot Water, Julian, and table schedules. Customer delivery intervals can be automatically updated based on actual deliveries, or you may lock them. The system maintains a history of degree day and K-Factor values for each delivery made.
Relationship Drops	Automatically produce tickets for nearby tanks when a "Relationship" delivery is scheduled, to save long runs back to zones just fulfilled. Use this function to assist in optimizing your deliveries.
Powerful Account Look Up	Gain instant access to your customer data by searching on any part of a customer name, address, phone number, ZIP code, city, and many more. You can also set multiple selection criteria, by user.
Online Order Taking	Use instant credit checking and delivery history to turn inquiries into orders while the caller is on the phone. Capture delivery notes and instructions and use "quick-print" tickets during the order-taking process to speed up dispatch and delivery.
Multi-Drop Scheduling	Assign multiple tanks with different delivery schedules and intervals to a specific Accounts Receivable account, allowing for maximum credit control without sacrificing delivery efficiency. This scheduling option is perfect for landlords and property managers with multiple properties.
Flexible Budget and Payment Plans	Tailor budget and payment plans to fit your customer. Budget and payment plans can be fixed or variable based on gallons or dollars.
Multiple Price Levels	Price tickets for your customers at several levels. Each price level may have a schedule of quantity breaks associated with that level. This helps make sure your pricing agreements are honored - especially with your high-volume commercial accounts.
Automatic Billing for Service Contracts and/or Tank Insurance	Annual charges for service contracts and tank insurance can be included on the customer's regular monthly statement in the month you designate, without making special selections or postings.
Unlimited Memo Recording	Keep all the notes about your customers as you wish. Organize them by category, such as credit conversations, furnace specifications, installation quotes, repair notes, and delivery notes. A reminder date can be specified for each memo so your sales staff or credit personnel can easily recall their follow-up calls.
Management and Sales Reporting	Keep statistics like number of deliveries, total gallons per delivery, and average gallons per delivery on a month-to-date and year-to-date basis, by driver, and by truck. Calculate customer profitability on MTD and YTD basis.

AVAILABILITY:

MAS 90 or MAS 200
Version 3.71 or later
